INTERNATIONAL EUROPEAN UNIVERSITY

EDUCATIONAL AND SCIENTIFIC INSTITUTE "EUROPEAN MEDICAL SCHOOL"

COURSE TRAINING PROGRAM MICROBIOLOGY, VIROLOGY, IMMUNOLOGY

Degree level

Master

Field of study 22 "Health care"

Specialty

222 "Medicine"

DEVELOPED AND SUBMITTED: Educational and Scientific Institute "European Medical School", Department of Fundamental and Medical and Preventive Disciplines.

Developed by: Kostynskyi G.B., manager Department of Fundamental and Medical Preventive Disciplines, Vergolyas M.R. Doctor of Medicine, Professor of the Department of Fundamental and Medical Preventive Disciplines, N.P. Rybalchenko, Candidate of Science, Associate Professor of the Department of Fundamental and Medical Preventive Disciplines.

Approved at the meeting of the Scientific Council of the ESI"EMS" $N_0 = 1 - of = 0$ of 2022

Introduction

Study program of the academic discipline "Microbiology, virology and immunology" compiled in accordance with Standard of higher education of the second (master's) level of training for higher education holders of the "Master's" educational degree, field of knowledge 22 - "Health care", specialty - 222 "Medicine", educational qualification level "Master of Medicine".

Description of the academic discipline (abstract). The study of the discipline "Microbiology, Virology and Immunology" is based on knowledge main natural and scientific disciplines: medical biology, medical and biological physics, biological and bioorganic chemistry, human anatomy, histology, cytology and embryology, Latin language, history of medicine, philosophy and integrates with these disciplines.

The subject of study of the educational discipline is the properties of pathogenic representatives of the world of microbes, their interaction with the human body, mechanisms of the development of infectious diseases, methods of their diagnosis, specific prevention and treatment.

Interdisciplinary connections:

The study of the discipline "Microbiology, virology and immunology" lays the foundations for students to study general hygiene, epidemiology, pathological physiology, pathological anatomy, immunology and allergology, infectious diseases, internal diseases, surgical diseases and children's diseases and other clinical disciplines, which involves the integration of teaching with these disciplines and applying knowledge of microbiology, virology and immunology in the process of further education and professional activity. Also, the discipline lays the foundations of teaching

about the physiological role of microbes in the human body and the prevention of disruption of these functions in the process of medical interventions .

1. The purpose and tasks of the educational discipline

1.1. The purpose of studying the discipline stems from the goals of the educational and professional training program for graduates of a higher medical educational institution and is determined by the content of those systemic knowledge and skills that a specialist doctor must master. The knowledge that students receive from the academic discipline "Microbiology, virology and immunology" is basic for the block of disciplines that provide natural-scientific (PN block) and professional-practical (PP block) preparation

1.2. The main tasks of studying the academic discipline "Microbiology, virology and immunology" are:

- Interpret the biological properties of pathogenic and non-pathogenic microorganisms, viruses and patterns of their interaction with the macroorganism, the human population and the external environment.
- To determine the methods of microbiological and virological diagnostics, etiotropic therapy and specific prevention of infectious diseases.
 - Explain the structure of the immune system of the human body.
 - Interpret the main mechanisms of formation of the immune response of the human body.
- Determine the main types of pathological reaction of the immune system and connections with the emergence of the most common human diseases.

1.3 Competencies and learning outcomes, the formation of which contributes to the discipline (interrelationship with the normative content of the training of higher education applicants, formulated in terms of learning outcomes in the Standard of Higher Education).

According to the requirements of the Standard of Higher Education of Ukraine (second (master's) level of higher education, field of knowledge 22 "Health care", specialty 222 "Medicine"), the discipline ensures that students acquire the following competencies:

-integral: the ability to integrate knowledge and solve complex specialized tasks in broad and multidisciplinary contexts of a doctor's professional activity, to solve practical problems in new or unfamiliar environments in the presence of incomplete or limited information, taking into account the aspects of social and ethical responsibility in the field of health care .

- general and professional:

	general competence (ZK)			
ZK 1.	Ability to abstract thinking, analysis and synthesis.			
ZK 2.	Ability to learn and master modern knowledge.			
ZK 3.	Ability to apply knowledge in practical situations.			
ZK 4.	Knowledge and understanding of the subject area and understanding of professional activity			
ZK 5.	Ability to adapt and act in a new situation			
ZK 6.	Ability to make informed decisions			
ZK 7.	Ability to work in a team			
ZK 8.	Ability to interpersonal interaction			
ZK 10.	Ability to use information and communication technologies			
ZK 11.	Ability to search, process and analyze information from			
ZK 12	Determination and persistence of delivered tasks and taken responsibilities			
	Professionals competence (FC)			
FC 1.	Ability to collect medical information about the patient and analyze clinical data			

FC 2	Ability to determine the necessary list of laboratory and instrumental studies and evaluate their results
FC 3	Ability to establish a preliminary and clinical diagnosis of the disease
FC 6	Ability to determine the principles and nature of treatment and prevention of diseases
FC 7	Ability to diagnose emergency conditions
FC 11.	Ability to solve medical problems in new or unfamiliar environments in the presence of incomplete or limited information, taking into account aspects of social and ethical responsibility.
FC 17	The ability to assess the impact of the environment, socio-economic and biological determinants on the state of health of an individual, family, population.
FC 23	The ability to develop and implement scientific and applied projects in the field of health care.
FC 24	Adherence to ethical principles when working with patients and laboratory animals
FC 25	Adherence to professional and academic integrity, to be responsible for the
	reliability of the obtained scientific results Software the results teaching (PRN)
PRN 1.	Have thorough knowledge of the structure of professional activity. Be able
T KIV 1.	to carry out professional activities that require updating and integration of knowledge. To be responsible for professional development, the ability for further professional training with a high level of autonomy
PRN 2.	Understanding and knowledge of basic and clinical biomedical sciences, on
11012.	level sufficient for solving professional tasks in the field of health care
PRN 3	Specialized conceptual knowledge, which includes scientific achievements in the field of health care and is the basis for conducting research, critical understanding of problems in the field of medicine and related interdisciplinary problems.
PRN 4	Identify and identify leading clinical symptoms and syndromes (according to list 1); according to standard methods, using preliminary data of the patient's history, data of the patient's examination, knowledge about the person, his organs and systems, establish a preliminary clinical diagnosis of the disease (according to list 2).
PRN 7	Assign and analyze additional (mandatory and optional) methods examination (laboratory, functional and/or instrumental) (according to list 4), patients with diseases of organs and systems of the body for carrying out differential diagnosis of diseases (according to list 2).
PRN 8	Determine the main clinical syndrome or what causes the severity of the condition of the victim/injured (according to list 3) by making a reasoned decision and assessing the person's condition under any circumstances (in the conditions of a health care institution, outside its borders), including in conditions of emergency and hostilities, in field conditions, in conditions of lack of information and limited time.
PRN 9	Determine the nature and principles of treatment (conservative, operative) of patients with diseases (according to list 2), taking into account the patient's age, in the conditions of a health care institution, outside its borders and at the stages of medical evacuation, including in field conditions, on the basis of a preliminary clinical diagnosis, observing the relevant ethical and legal norms, by making a reasoned decision according to existing algorithms and standard schemes, in case of the need to expand the standard scheme, be able to substantiate personalized recommendations under the control of the head physician in the conditions of a medical institution
PRN 14	Determine tactics and provide emergency medical care in emergency situations (according to list 3) in limited time conditions in accordance with existing clinical protocols and standards of treatment

PRN 19	Plan and implement a system of anti-epidemic and preventive measures regarding the
	occurrence and spread of diseases among the population.
PRN 20	Analyze the epidemiological situation and carry out measures of mass and
	individual, general and local prevention of infectious diseases
PRN 21.	to search necessary information in professional literature and databases
	data others sources, analyze, evaluate and apply this one information.
PRN 23	Evaluate influence surrounding environment on health a person
	to assess the state of the disease population
PRN 24	Organize necessary level individual security (own and
	persons about whom cares) in case occurrence typical dangerous situations in
	the individual poly activities.
PRN 25	Clearly and unambiguously convey own knowledge, conclusions and arguments
	about protection problems health and related questions to specialists and non-
	specialists
PRN 28	Accept effective solutions to security problems health, evaluate
	are needed resources to consider social, economic and ethical consequences
PRN 29	Plan, organize and conduct events with specific prevention _ infectious diseases
	, including according to the National preventive calendar vaccinations , both
	mandatory and recommended. Manage vaccine residues, organize additional
	vaccine campaigns, in including immunoprophylaxis measures
	• • • • • • • • • • • • • • • • • •

Integrative final program learning outcomes, the formation of which is facilitated by the educational discipline:

- The ability to analyze the biological properties of pathogenic and non-pathogenic microorganisms, viruses and patterns of their interaction with the macroorganism, the human population and the external environment.
- The ability to interpret the main mechanisms of the formation of the immune response of the human body.
- The ability to determine the main types of pathological reaction of the immune system and connections with the emergence of the most common human diseases.
- Ability to determine methods of microbiological and virological diagnostics, etiotropic therapy and specific prevention of infectious diseases.

According to the standards of higher education, students must:

Know: In the conditions of a medical institution, applying a standard procedure, using knowledge about a person, his organs and systems, based on the results of laboratory and instrumental studies, evaluate information about the diagnosis (according to list 4):

- Serological reactions in infectious diseases;
- Microbiological research of biological fluids and secretions;
- Chemical, organoleptic, bacteriological research of food and water quality.

Be able to:

- Evaluate the results of laboratory and instrumental studies (according to the list 4);
- Anticipate the negative consequences of exposure to dangerous factors on the human body;
- Master modern methods of microbiological research with infectious diseases:
- Analyze the principles of obtaining vaccine preparations, methods of their standardization and control, practical use;

- Master the principles of production of immune sera, methods of their standardization, control, practical significance;
 - Interpret the development of medicine in historical retrospect;
 - Interpret the main historical and medical events;
- Demonstrate mastery of moral and ethical principles of attitude towards a living person, his body as an object of anatomical and clinical research.

2. Information volume of the academic discipline

270 hours, 9 ECTS credits are allocated to the study of the academic discipline.

The program of the discipline "Microbiology, virology and immunology" is structured into 2 sections, which include blocks of content sections.

270 hours (9 ECTS credits) are allocated to the study of the academic discipline.

Section I: 120 hours 4, 0 ECTS loan.

Section II: 150 hours 5.0 ECTS loan.

Chapter 1. Morphology and physiology of microorganisms. Infection. Immunity.

Content sections:

- 1. Introduction to microbiology.
- 2. Morphology and structure of prokaryotes and parasitic unicellular eukaryotes. Staining of microorganisms. Microscopy.
 - 3. Physiology of bacteria. Evolution and classification of microorganisms.
 - 4. Genetics of microorganisms.
 - 5. Microbiological bases of antimicrobial chemotherapy and antiseptics.
 - 6. Infection.
- 7. The immune system of the body. Reactions of nonspecific protection against infectious agents.
 - 8. Antigens, antibodies.
 - 9. Reactions of immunity. Immunopathology.

Chapter 2. General and special virology.

Content sections:

- 10. General virology.
- 11. Special virology.
- 12. Pathogenic prokaryotes and eukaryotes.
- 13. Fundamentals of clinical microbiology.
- 14. Sanitary microbiology and virology.

9. Individual tasks are not included in the program

1 0 Teaching methods

According to the sources of knowledge, teaching methods are used: verbal - story, explanation, lecture, instruction; visual - demonstration, illustration; practical - practical work, problem solving. According to the nature of the logic of knowledge, methods are used: analytical, synthetic, analytical-synthetic, inductive, deductive. According to the level of independent mental activity, the following methods are used: problem-based, searching, research.

- 1. Verbal methods: lecture, conversation;
- 2. Visual methods: illustration, demonstration
- 3. Practical methods: performing practical work and solving situational tasks to develop skills and abilities;
 - 4. Students' independent work on understanding and assimilation of new material
 - 5. Use of control and educational computer programs
 - 6. Innovative teaching methods: business game, case method.

The types of training according to the curriculum are: lectures; practical training; independent work of students.

11. Control methods

Current control is carried out on the basis of control theoretical knowledge, practical skills and abilities.

Forms of current control are: *in the* dream survey (frontal, individual, combined), interview; practical verification of professional skills (conducted based on the results of practical work at the end of the class); test control ("open" and "closed" test tasks).

Current control is mandatory. During the evaluation of mastering of each topic from all disciplines of the curriculum for the current educational activity, the student is given grades on a 4-point (traditional scale) taking into account the approved evaluation criteria for the discipline. All types of work provided by the curriculum are taken into account. The student must receive a grade in each topic. The teacher conducts a survey of each student in the group at each lesson and assigns a grade in the journal of attendance and student performance according to the traditional scale ("5", "4", "3", "2").

When evaluating the student's current educational activity, 20% of the grade is the student's independent work, which takes into account the knowledge of the topic of independent study and the performance of work in the notebook.

12. The form of final control of study success.

The final control of the discipline is carried out on the basis of theoretical control knowledge, practical skills and abilities.

Assessment is a form of final control, which consists in assessing the student's learning of the learning material based solely on the results of his performance of certain types of work in practical, seminar or laboratory classes. Semester assessment of subjects is carried out after the end of its study, before the beginning of the examination session.

An exam (differential assessment) is a form of final control of a student's assimilation of theoretical and practical material from an educational discipline.

13. Scheme of calculation and distribution of points received by students.

The maximum number of points for a discipline is 200 points. The ratio between the results of the evaluation of the current educational activity and the final control of knowledge is 60% and 40%.

The first semester of studying the discipline ends with a test.

The maximum number of points that a student can score for the current educational activity while studying the discipline is 200 points, **the minimum number of points** - the minimum number of points - is 120 points.

The calculation of the number of points is carried out on the basis of the grades received by the student on a 4-point (national) scale during the study of the discipline, by calculating the arithmetic mean, rounded to two decimal places.

The student receives a credit in the last lesson of the discipline based on the results of the current assessment.

Only those students who do not have academic debt and whose average score for the current academic activity in the academic discipline is at least 3.00 are admitted to the credit.

The average grade for the current activity is converted into points on a 200-point scale, according to the conversion table (Table 1).

Table 1. Recalculation of the average grade for the current activity into a multi-point scale (for disciplines ending with credit)

4-point	200-	4-point	200-	4-point	200-	4-point	200-point
scale	point	scale	point	scale	point	scale	scale
	scale		scale		scale		
5	200	4.47	179	3.94	158	3.42	137

4.52	181	4.00	160	3.47	139	< 3	(refolding)
4.49	180	3.97	159	3.44	138		

The learning result is also evaluated on a two-point scale (passed/failed).

Table 2
The scale of transferring points to the national system

According to the national system	On a 200-point scale		
counted	from 120 to 200 points		
not counted	less than 119 points		

Students' independent work, which is provided for by the topic of the lesson along with classroom work, is evaluated during the current control of the topic in the corresponding lesson.

<u>The second semester (the last semester of studying the discipline)</u> ends with a final control in the form of an exam.

Only those students who do not have academic debt (all missed classes have been completed) and whose average score for the current educational activity in the academic discipline is at least "3" are admitted to the exam.

The maximum number of points that a student can score for the current educational activity for admission to the exam is 120 points and is defined as the sum of the arithmetic average of all grades received in the semester.

The minimum number of points that a student must score for the current educational activity for admission to the exam is 72 points. Recalculation of the average grade for the current academic performance (on a 120-point scale) in the table. 3.

Table 3. Recalculation of the average grade for the current academic performance in a multi-point scale for disciplines ending with an exam

4-point scale	200-point scale	4-point scale	200-point scale	4-point scale	200-point scale
5	120	4.29	103	3.58	86
4.96	119	4.25	102	3.54	85
4.92	118	4.21	101	3.50	84
4.87	117	4.17	100	3.46	83
4.83	116	4.12	99	3.42	82
4.79	115	4.08	98	3.37	81
4.75	114	4.04	97	3.33	80
4.71	113	4.00	96	3.29	79
4.67	112	3.96	95	3.25	78
4.62	111	3.92	94	3.21	77
4.58	110	3.87	93	3.17	76
4.54	109	3.83	92	3.12	75
4.50	108	3.79	91	3.08	74
4.46	107	3.75	90	3.04	73
4.42	106	3.71	89	3	72
4.37	105	3.67	88	Logg than 2	Not anough
4.33	104	3.62	87	Less than 3 Not enough	

The maximum number of points that a student can score when taking the exam is 80 (the minimum number is at least 50).

Discipline assessment is defined comprehensively as the sum of points for the current educational activity and points for the exam.

From the allocated 120 points for the current educational activity, 4 to 12 additional points are allocated for the assessment of individual independent work of higher education applicants, according to the work curriculum. Encouragement points are added to the final grade for the discipline at the end of its study.

Points with disciplines for students, which successfully completed the program are converted into the national scale and ECTS system (Table 4, 5).

Table 4.

Discipline points	Evaluation on a 4-point scale
From 180 to 200 points	5
From 150 to 179 points	4
From 149 points to the minimum number of points that the student must score	3
Below the minimum number of points that the student must score	2

Scale assessment: national and ECTS

Sum	Rating	Rating by national scale		
points	ECTS	for exam, difzalik	for offset	
180-200	A	perfectly		
160-179	В	okay	1	
150-159	С		counted	
130-149	D	satisfactorily		
120-129	Е			
50-119	FX	unsatisfactorily with the	not counted with possibility	
		possibility of refolding	rearrangement	
0-49		unsatisfactorily with	not counted with mandatory	
	F	mandatoryrepeated studying	repeated study	
		the discipline	disciplines	

14. Methodical support

- 1. Working curriculum of the discipline;
- 2. Plans of lectures, practical classes and independent work of students;
- 3. Abstracts of lectures on the discipline;
- 4. Methodical instructions for practical classes for students;
- 5. Methodical materials that ensure independent work of students;
- 6. Test and control tasks for practical classes;
- 7. List of exam questions
